Summary

Senior Software Engineer with 7+ years delivering education and enterprise platforms on C#, .NET 10, Blazor and SQL Server. Guide a 20-developer Blazor team, architected a high-concurrency Blazor WebAssembly portal, and lead Microsoft Entra ID SSO for a legacy WebForms platform backed by 100+ SQL Server databases. Daily user of AI-assisted development (Claude Code, GitHub Copilot).

Technical Skills

Languages: C#, T-SQL, JavaScript, HTML5, CSS3

Frameworks: .NET 10 / .NET Core, ASP.NET Core Web API, Blazor WebAssembly & Server, ASP.NET WebForms (.NET 4.8), Entity Framework Core, LINQ

Data & Security: SQL Server (schema design, indexing, query tuning, multi-database), Microsoft Entra ID SSO, OWIN, JWT, role-based authorization

Cloud & Tools: Azure, AWS, Azure DevOps, Git/GitHub, IIS, Syncfusion, DevExpress, SSRS, Bold Reports, Crystal Reports, Claude Code, GitHub Copilot

Experience

Senior Software Engineer - Orison Software Specialists, Sharjah, UAE | Sept 2019 - Present

School-management and enterprise software serving multiple school branches, each on its own SQL Server database.

- Guide 20 developers on Blazor delivery: architecture, coding standards, code reviews, and mentoring the move from WebForms to Blazor.
- Architect .NET 10 / Blazor WebAssembly products that integrate with the legacy ASP.NET 4.8 WebForms platform, avoiding a risky big-bang rewrite.
- Design data access across 100+ customer and branch databases on a shared SQL Server instance, so one codebase serves every client.
- Audited the core schema and shipped a corrected script adding missing foreign keys, FK indexes, uniqueness and concurrency controls, and fixing type inconsistencies.
- Delivered Finance/Accounts, CRM, Recruitment, Logistics and Document Management modules, plus an e-commerce portal with payment-gateway integration.
- Resolve production incidents end to end (root cause, query tuning, fixes); remediated a published CVE in an OpenAPI dependency.

Key Projects

- **Teachers Portal** (Blazor WebAssembly, .NET 10 Web API, Syncfusion, IIS): Teacher dashboard for Feeds, Mails, Timetable and Calendar. Chose standalone WebAssembly over Blazor Server to avoid per-user SignalR circuits at peak load; JWT auth with a custom AuthenticationStateProvider.
- **Microsoft Entra ID SSO** (OWIN, .NET 10): Phased rollout for the legacy WebForms login, mapping users by immutable Entra object ID, with a dual-auth API that accepts Entra and legacy JWTs so existing logins keep working during migration.
- **Parent Portal & Mobile App**: Maintain and extend the parent web portal and mobile app; currently building user activity tracking and audit logging across both.
- **Automated Greetings Mailer**: Scheduled daily service that queries every branch database and emails personalized birthday and anniversary greetings rendered from Blazor pages.

Education

B.Tech, Electronics and Communication Engineering - Institute of Engineering and Technology, University of Calicut | 2015 - 2019
